

USE CASE

Magento eBay Connector

POWERED BY WEBKUL SOFTWARE

Mike want to sell his products but currently he cannot afford huge costings

**So Mike decided to
open a shop on
eBay**

**After few years Mike opens his
own Magento store**

Now Mike has started adding products on his Magento store

It's quite typical to add all products one by one. Mike needs a solution so he can directly sync all the products from eBay to his Magento store

Mike used Webkul's

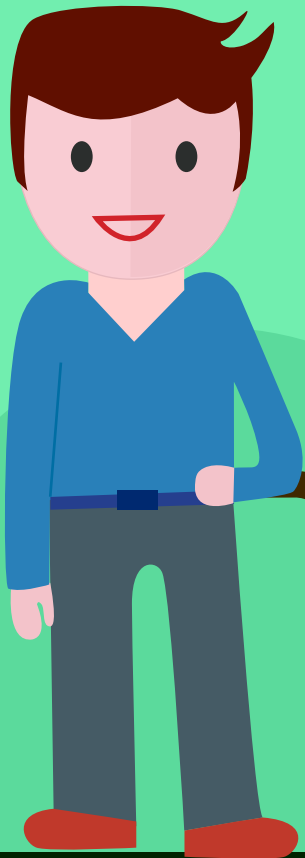

Magento eBay Connector

Using Magento eBay Connector, Mike synchronized all of his products from eBay to Magento store

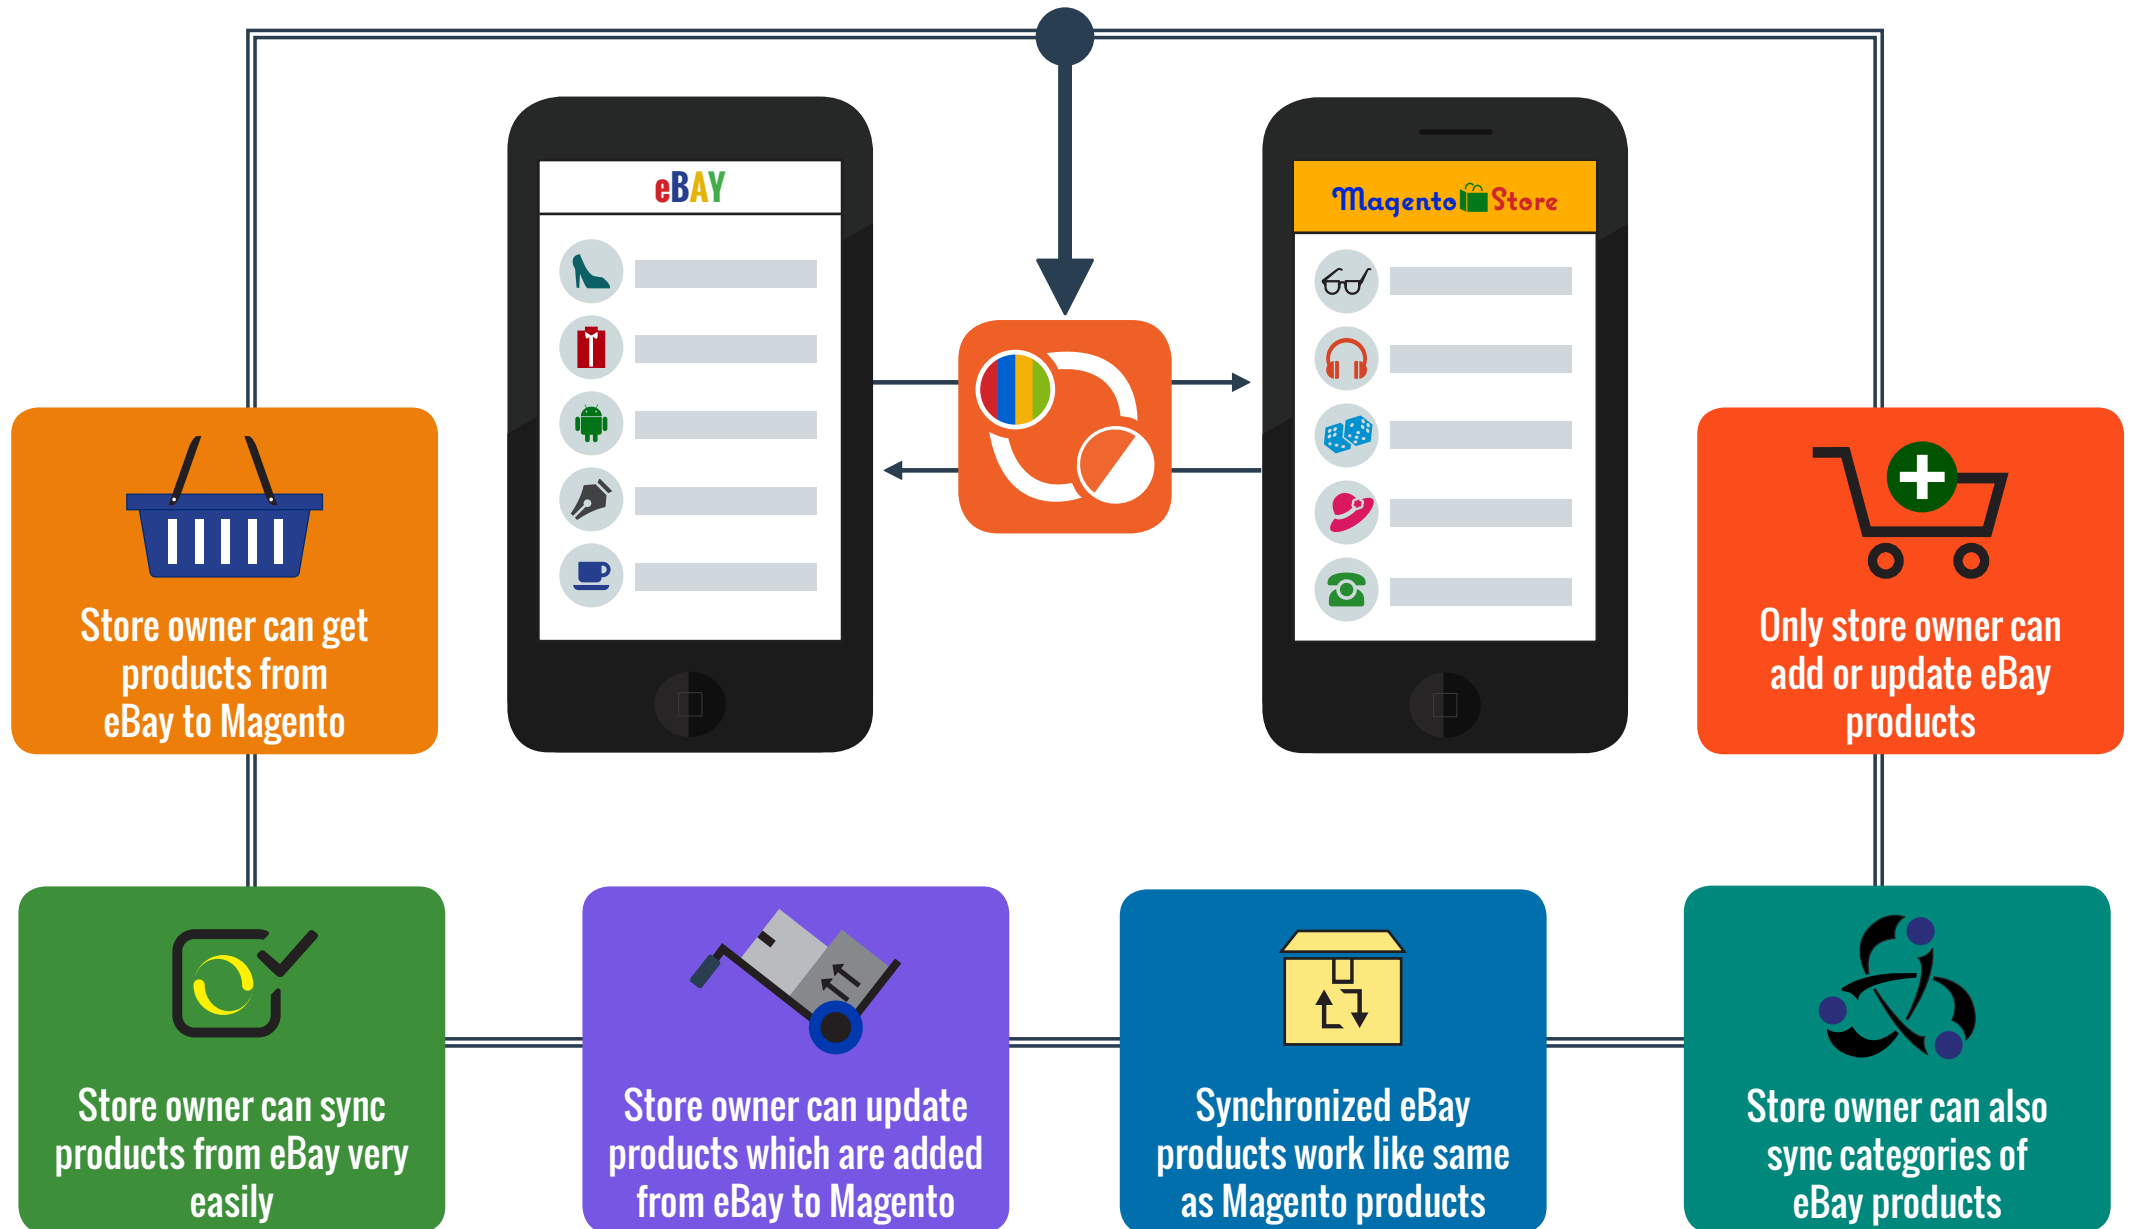

By using Magento eBay Connector Mike can sync products in bidirectional way. That is from eBay to Magento store and from Magento store to eBay

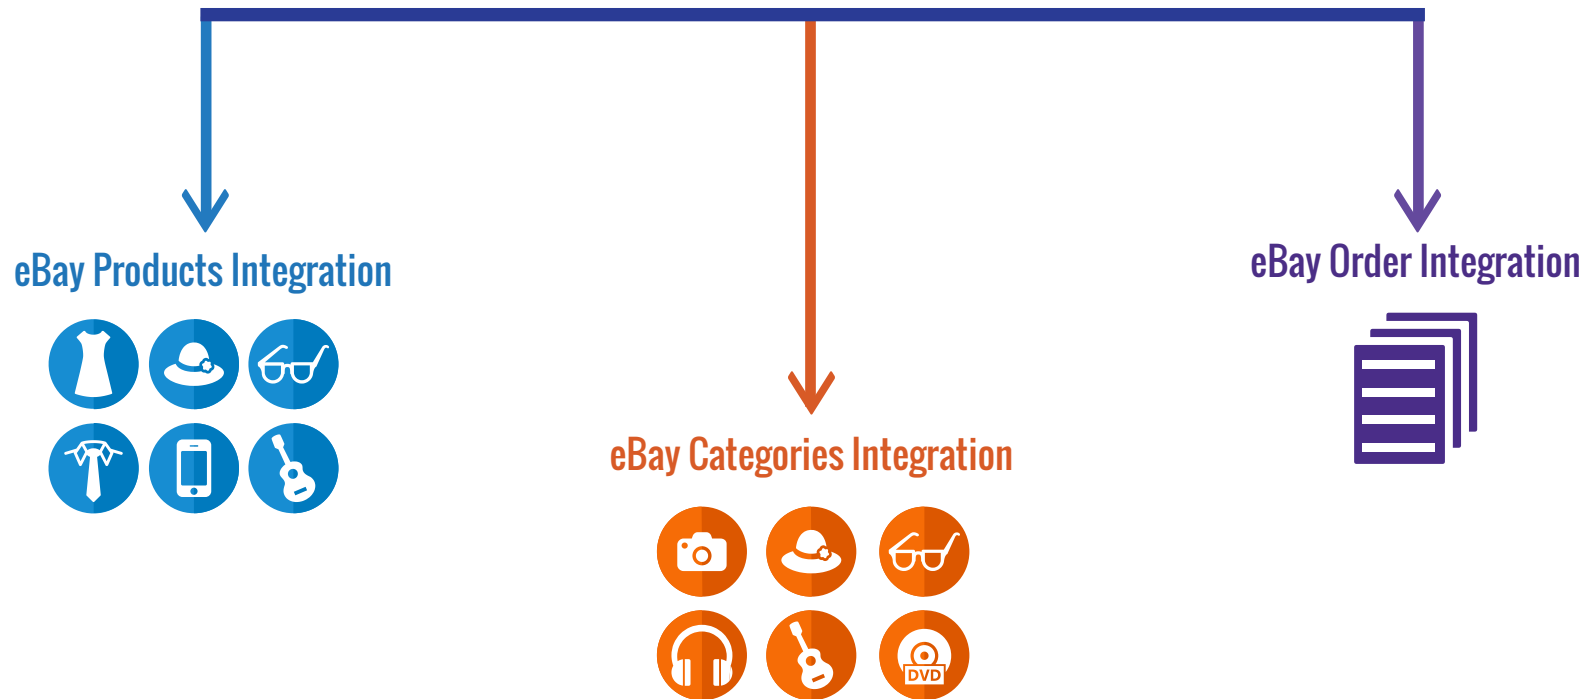

Magento eBay Connector

Magento eBay Connector Features

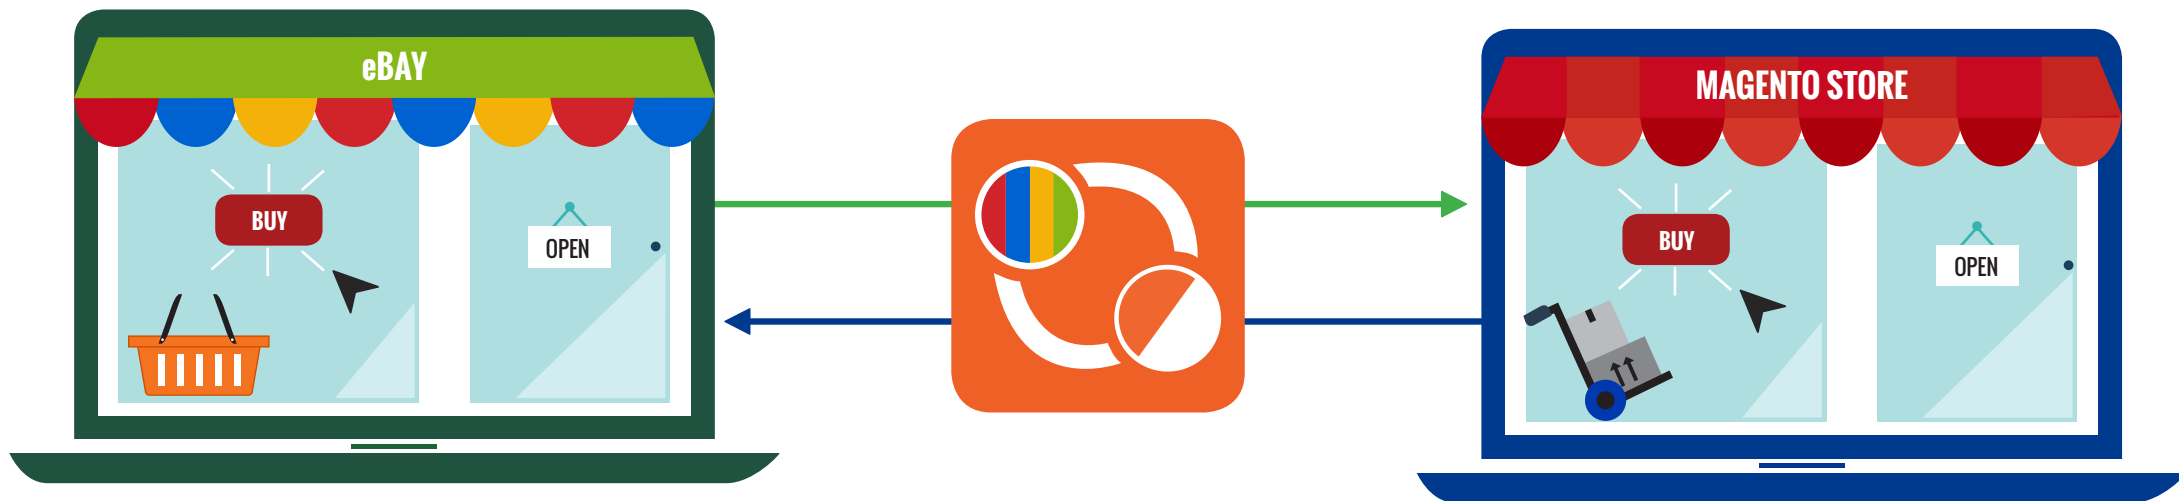

Magento eBay Connector Admin Management

Magento eBay Connector provide end to end integration between Magento and eBay

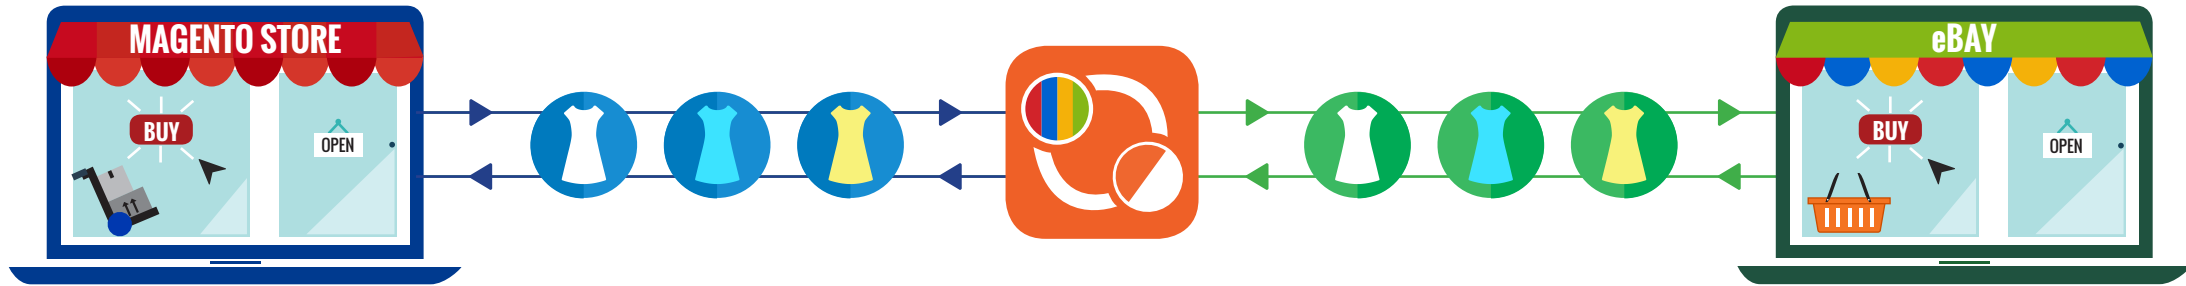

Magento To eBay - eBay To Magento

→ Magento eBay Connector provide both way integration that means admin can sync the product from Magento to eBay as well as from eBay to Magento.

Product Mapping

→ Admin can synchronize the products either from eBay or to the eBay.

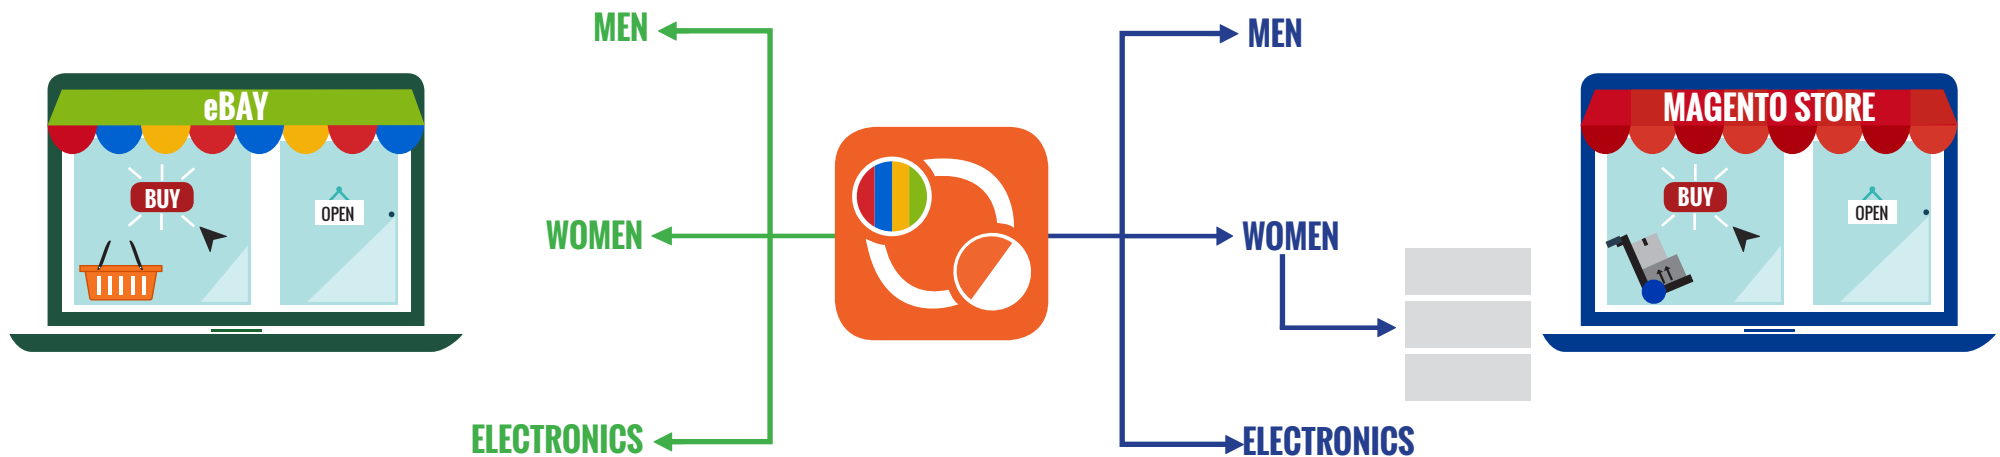

→ eBay product condition and specification are created as product attribute in Magento and eBay product variation are created as super attribute (used for configuration product) in Magento.

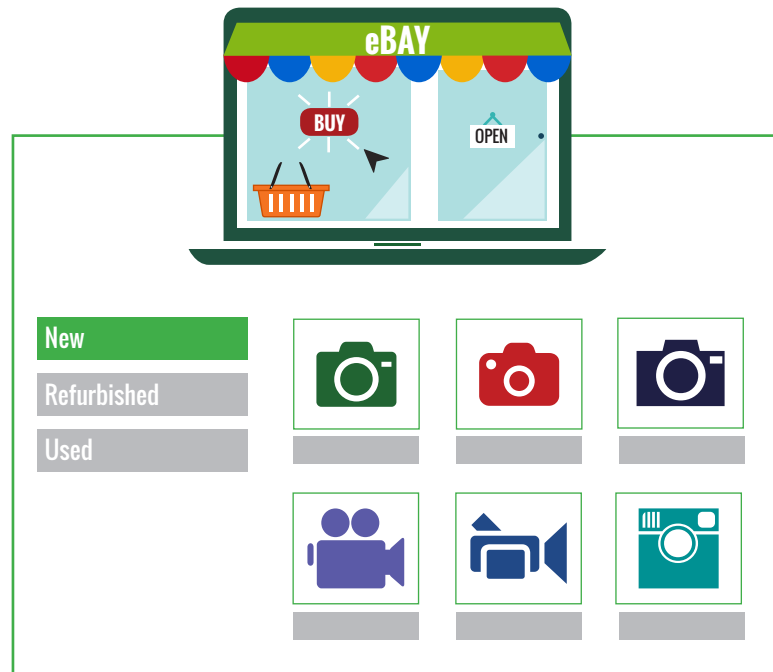

→ eBay product which have variations are created as configurable product in Magento. Admin have a feature to setup super attribute options price from the system to the products which were synced from eBay to Magento with variation.

Category Mapping

Admin can map eBay category to Magento category

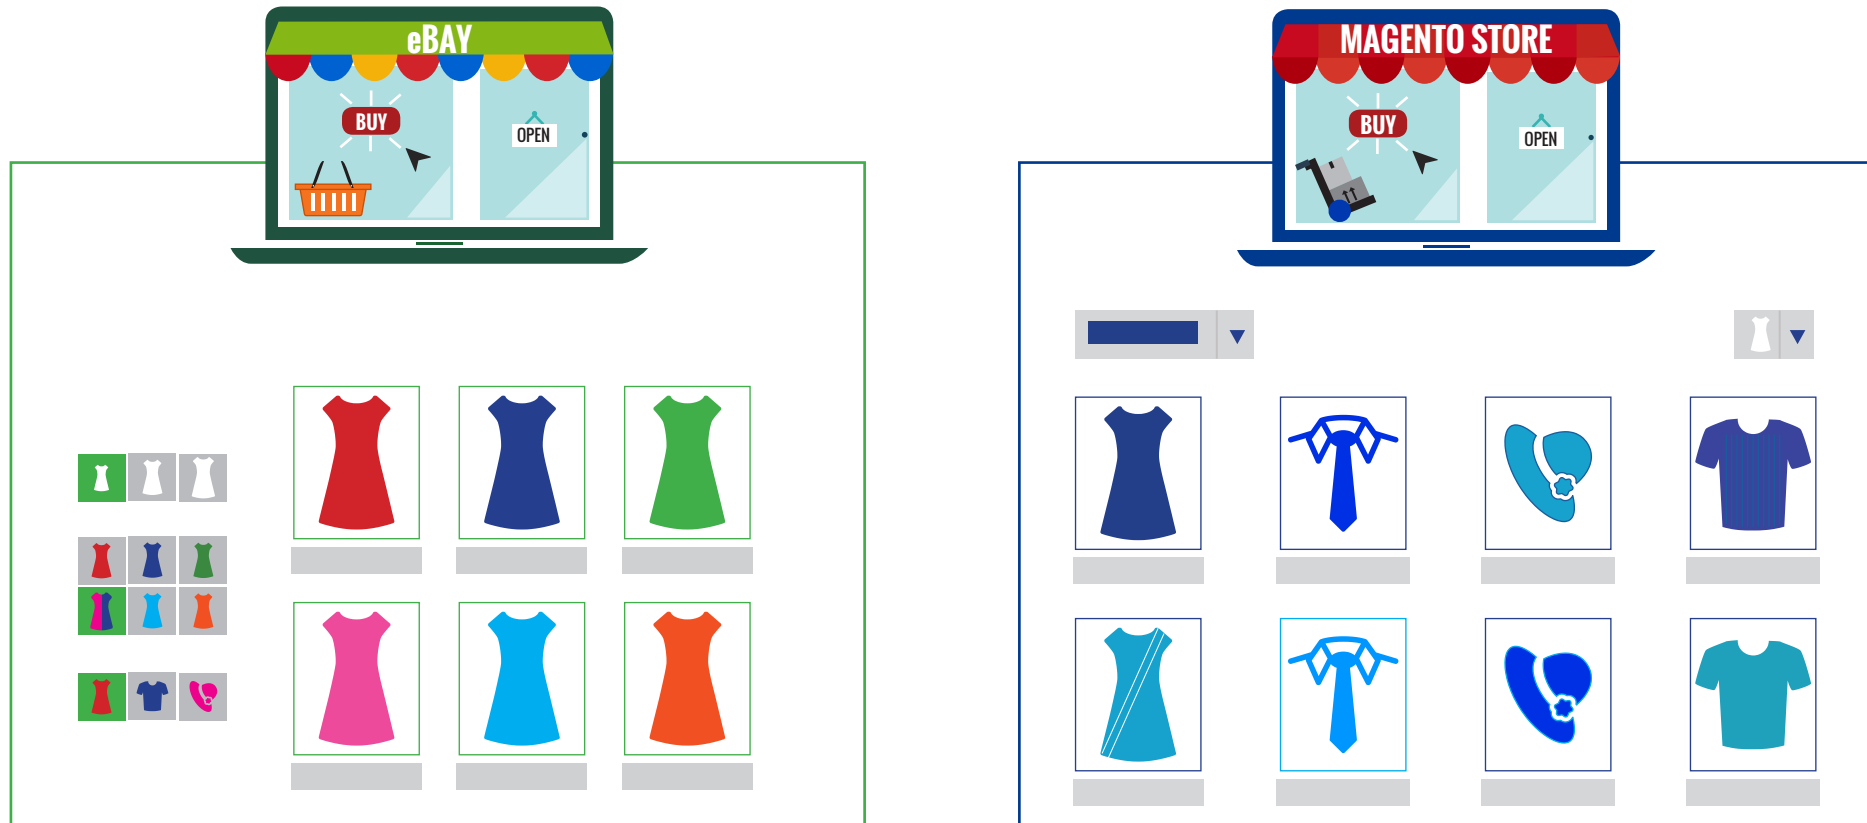

eBay Product Condition Managed in Magento

- eBay product condition is managed by Magento attribute label and these attributes label are identified by eBay category name.
- In eBay some category product have required condition and some have optional condition. When admin maps category, the condition is created as product attribute label in Magento and these attributes label are followed by eBay category name.

eBay Product Specifications Managed In Magento

→ eBay product specifications are created in Magento as product attributes and these product attributes are labeled which are followed by eBay category name.

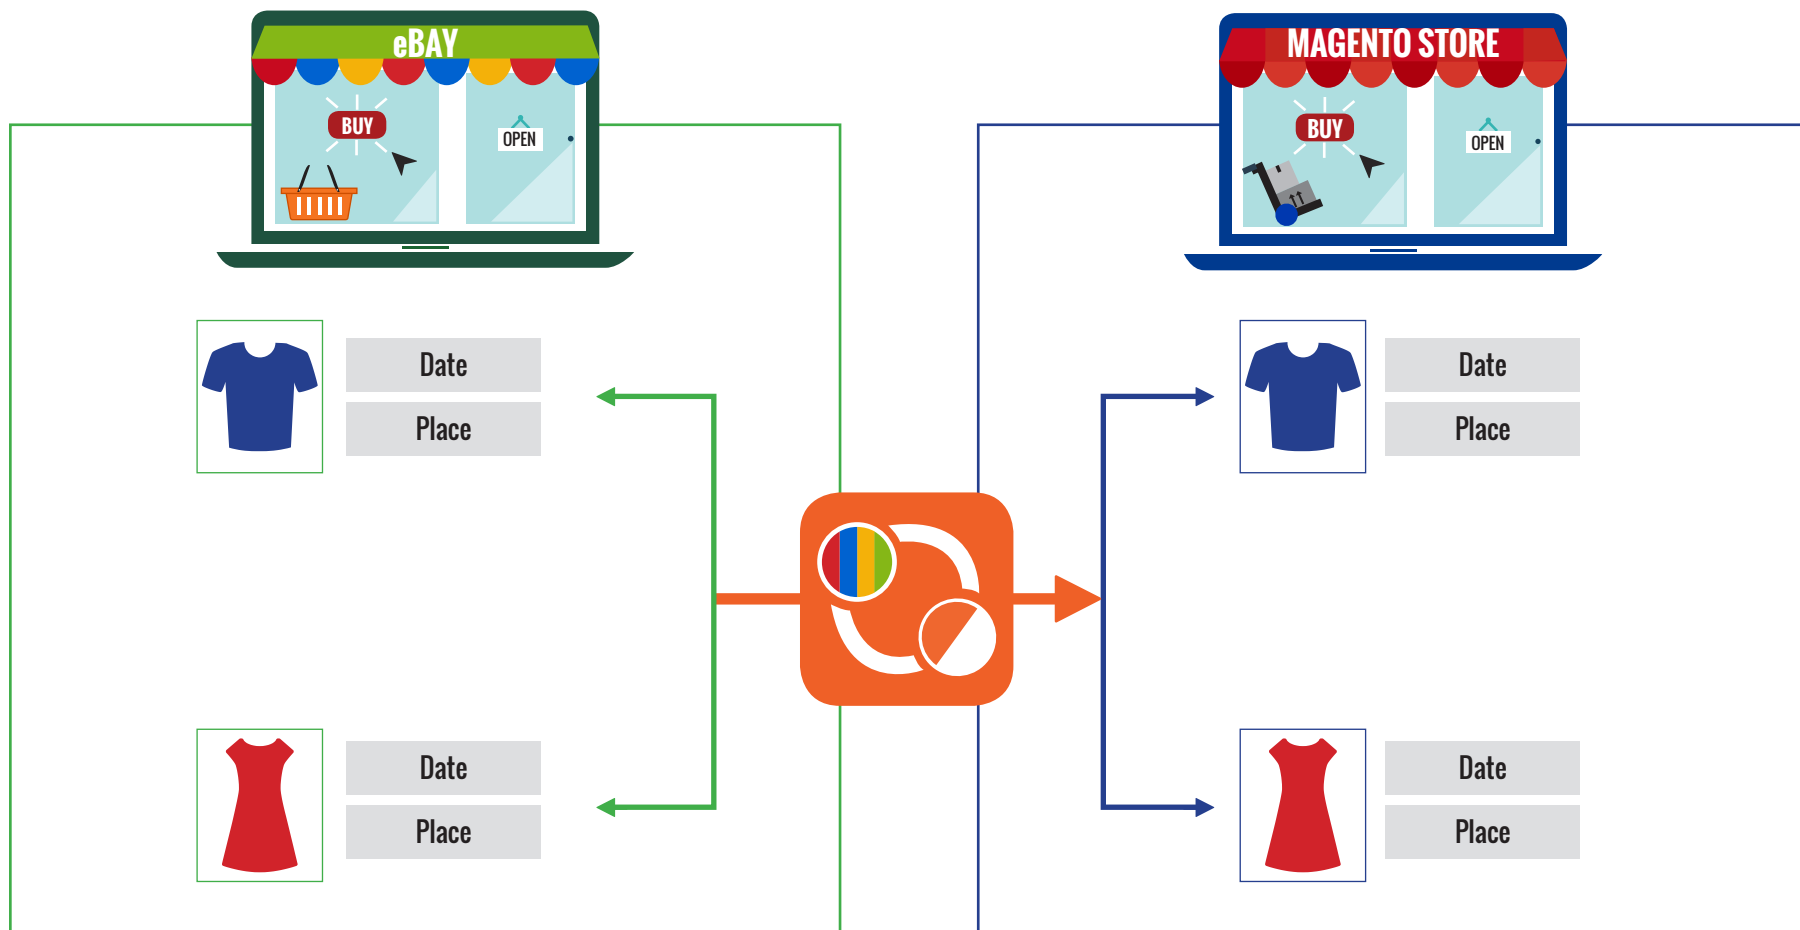

eBay Product Variation Managed In Magento

- Every eBay product with variation will be created as a configurable product in Magento.
- Every configurable product when synchronized to eBay from Magento will be created as ebay product with variation.

Order Mapping

Using this module, all the order of eBay product and order details will be mapped to Magento.
