Why to use Wallet System

Let's see how Wallet System enhance the User Experience

Mike want's to shop a shirt online

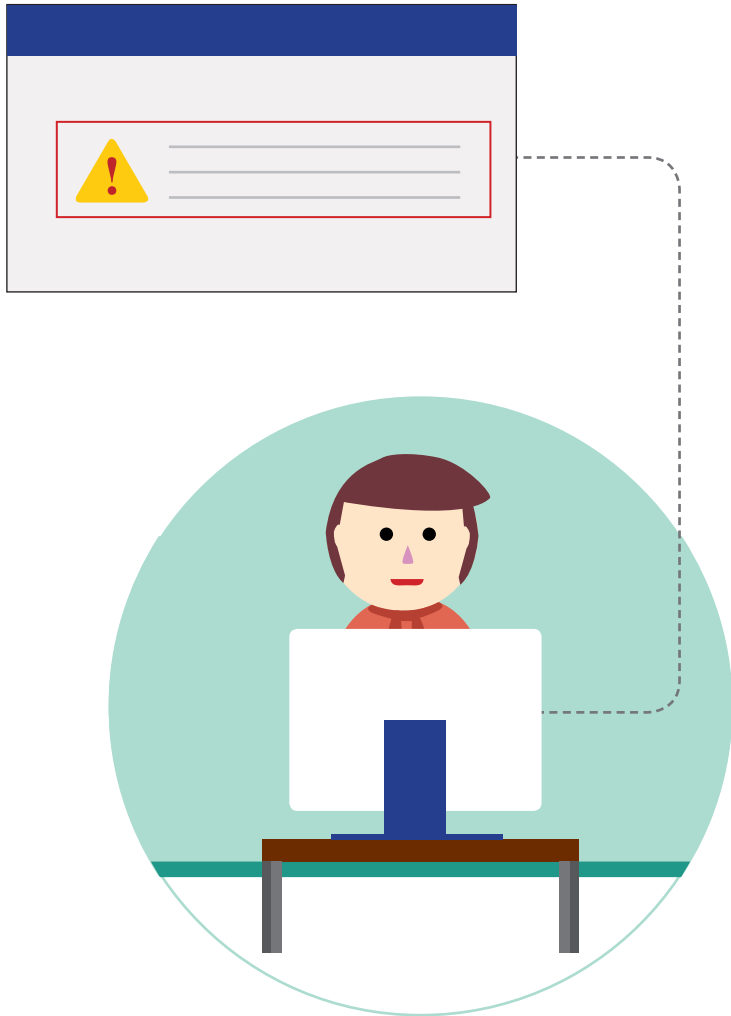

Mike adds a shirt to shopping cart and proceed to checkout via online payment channels

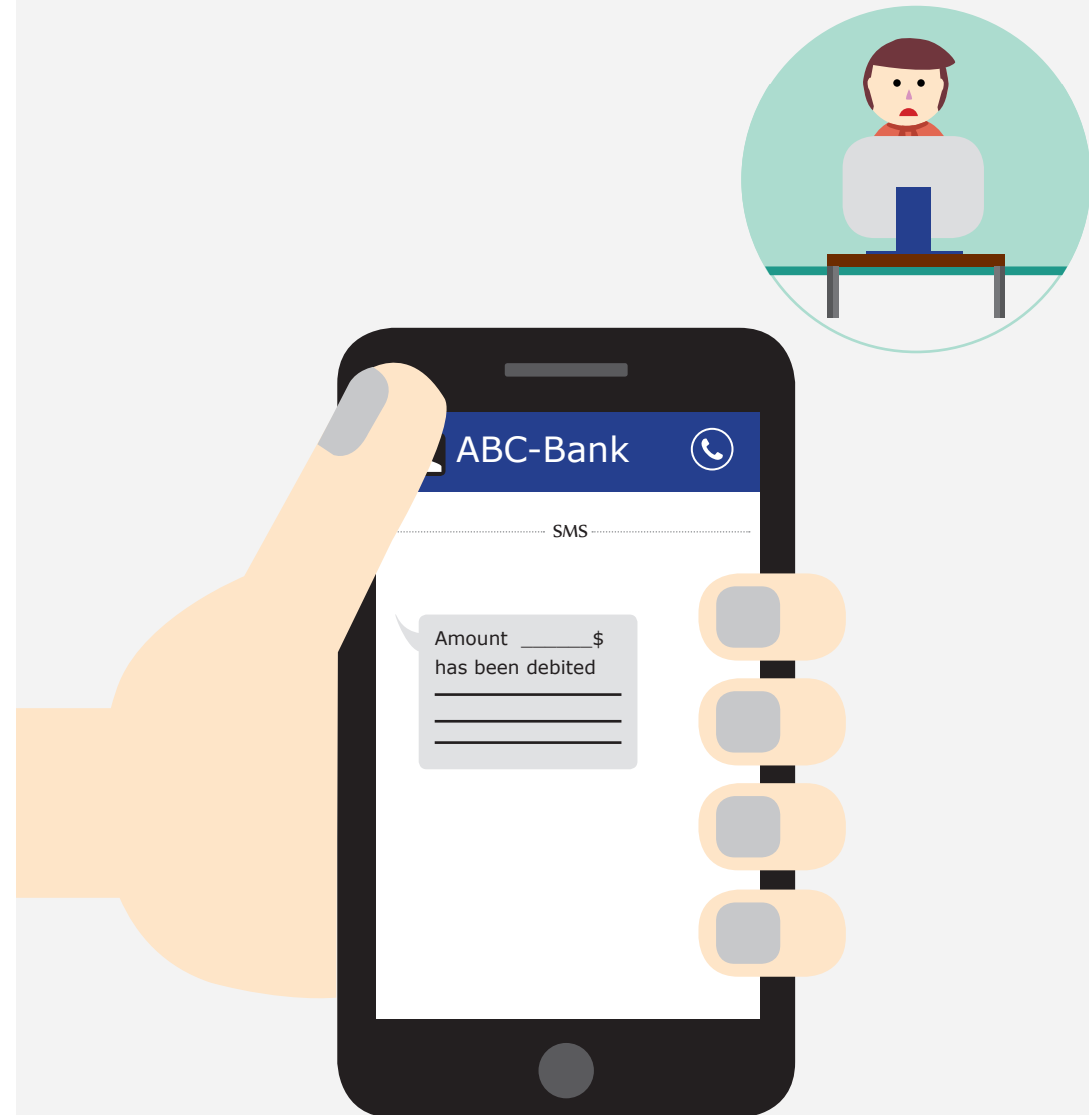

Why to use Wallet System ?

Bank didn't respond at the time of transaction. So, Mike's transaction was failed

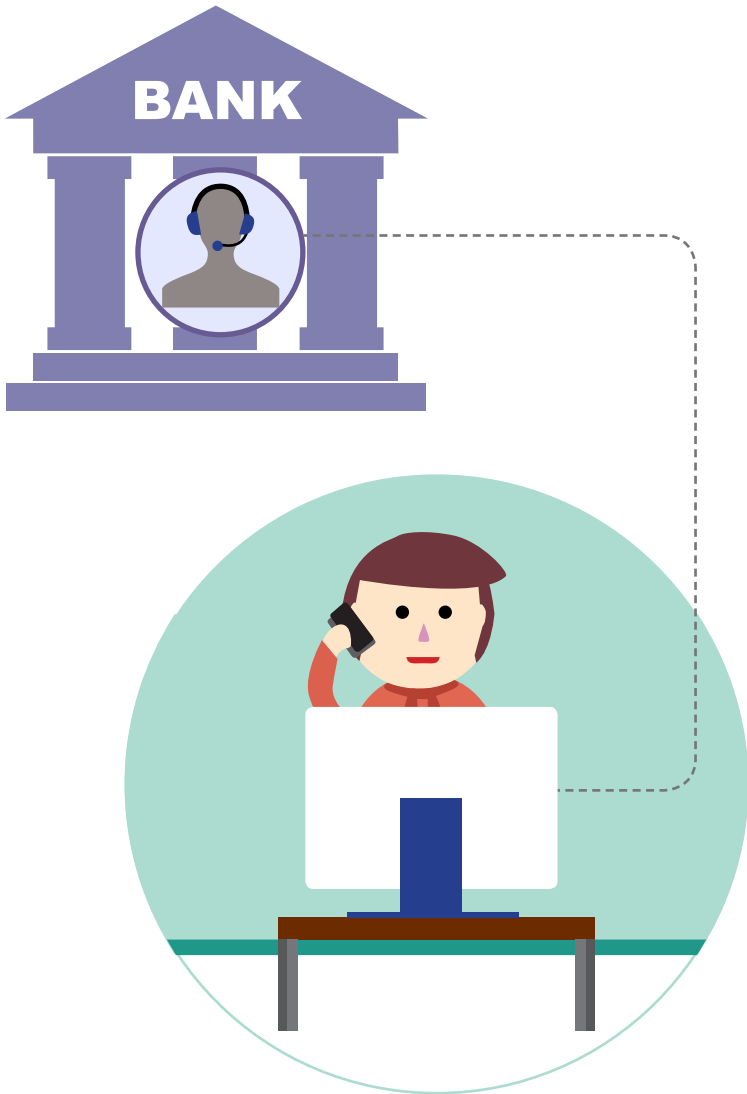

Simultaneously, Mike got a message from bank that amount was debited

Why to use Wallet System ?

So, Mike had contact with bank to opt for Refund/Payback

Mike was not able to pay because there was some error from bank's end, and sales for e-commerce store were drawdowned

Why to use Wallet System ?

What will happen if transaction is failed using Wallet System ?

Customer just need to contact with store and instantly money will be added to customer's Wallet
